Poland

Pfleiderer Grajewo S.A.

POWERTWIST

Dear Michal,

We use your PowerTwist A/13 and PowerTwist Ground Round 5/16" for conveying chip boards.

The total number of conveyors fitted with PowerTwist is 12 pes. Each conveyor has 6 belts on. Each belt is approximately 8.5m long.

Before we used to use timing belts which were causing us a lot of troubles, like unexpected failures, difficulties in changing. Also we had to keep a huge stock of belts in right length.

Since we switched to PowerTwist problems are gone. We change the belts once per 6 months instead of once per month.

We recommend this product for conveying because it is easy to install, it lasts long, we can make it to any length and it is not marking our products.

Best regards,

Andrzej Joka
Maintenance Engineer
