POWERTWIST

Hello Joanna,

We are using your red PowerTwist (A profile) belts in a big number of applications for conveying automotive glass both flat and bent. The best result we get on dry glass, if they are used in wet applications a lot of dirt will dry onto the belt and causing scratches sooner or later. But in dry conditions the last for a very long time, the also runs much more syncron than for instance round belts as Habasit polycord, when several belts are on the same shafts.

So I can recommend this product to be used in glass fabrication.

Of course we also use them as replacement for ordinary V- belts in fan drives and a lot of other applications.

Med vlinliga halsningar / Kindest Regards / Mit freundlichen Grüssen

Erik Behmer
